

### Our Patent

### Revolutionizes Connectivity

## The Benefits

- **Network Independence:** Freedom from existing Wi-Fi infrastructure eliminates concerns about security vulnerabilities, bandwidth limitations, compatibility issues, and expensive upgrades.
- **Encrypted Proprietary Communication:** Proprietary encryption offers a layer of security against unauthorized access, and not relying on shared networks minimizes hacking risks.
- **High Device Capacity:** Supporting up to 1000 devices per gateway is impressive, making it suitable for dense IoT networks.
- **Extensive Coverage:** 1 Gateway can cover expansive spaces, such as a large warehouse. Our solution provides excellent coverage capabilities for areas which were previously difficult to cover.

### INDEPENDENT

Proprietary Encrypted Communication: Stand alone, proprietary encryption eliminates additional system vulnerabilities vs connecting to WIFI.

### EASY

Fewer devices and minimal wiring mean lower installation and ongoing maintenance costs. Line-of-sight is not required for installation, reducing complexity and setup time.
